Product specifications

3 phase power distribution unit with a power rating of 63A, manufactured by ZiKE Labs, ensures quality and safety for situations where current protection is essential for events like concerts, conferences, or other cultural gatherings on outdoor stages or in auditoriums and concert halls. It is designed to power sound equipment and can be installed in a 19" 483mm Rack cabinet or enclosure. The power distribution box from ZiKE Labs is suitable for indoor and outdoor use and comes with the necessary safety certifications.

Tailored for the entertainment industry, the 63A rack power distribution unit by ZiKE Labs features both single-phase and three-phase outputs, with their quantity and protection methods optimized for stage work. Optional voltage and current measurement capabilities allow real-time power monitoring. The use of multiple residual-current circuit breakers ensures the safety of users and device stability, complying with current European standards.
